Eventually, the alarm stopped. All functions normal. Per discussion with Nik Zagarov, this annular sensor was replaced about 3 years ago; there is no clear explanation for why it stayed in alarm. However, issue was corrected and sensor is no longer triggering an alarm. Reminder- No positive shutdown of turbines from the fill sump sensors (only audible/visual alarm). Not required. However, UDC leak sensors do cause turbines to shut down (requirement).; Note: data in [EVAL Notes] field for some records is truncated from the source.
